DOTS
Address Validation - International

Improve deliverability, compliance, and customer engagement with Address Validation — International.

Our global address engine validates, appends and standardizes addresses in over 250+ countries and includes the ability to deliver to the apartment or suite level in major countries. Address Validation – International coverage also includes:

- Street-level or better accuracy for 88% of the world's countries
- Building-level or better accuracy for over half of the world
- Apartment-level accuracy for developed countries, including US, Canada, Australia, Hong Kong and the EU

Addresses are corrected to the unique requirements of each country's postal address formats.

How It Works

Validates Addresses for 250+ Countries

Instantly validates, appends and standardizes address data to correct postal formats for over 250 countries and territories worldwide.

Provides Building and Apartment Level Accuracy

Provides building level accuracy for a majority of countries and sub-premise (apartment/suite) level accuracy for much of the developed world.

Converts to Local Postal Formats

Returns line-by-line addresses displayed in a destination's local text and format, as well as parsing the addresses for further processing.

Address Conversion for Local Languages

Returns translated addresses in Roman characters for Cyrillic, Hellenic, Hebrew, Kanji, Simplified Chinese, Arabic, Thai and Hangul addresses.
