

DOTS Global Address Complete

Suggest Accurate Addresses From the First Keystroke

Global Address Complete allows visitors to quickly select an address as they start typing, reducing keystrokes, misspellings and incorrect address entry. The result is a faster ecommerce checkout, improved shipping accuracy, and reduced cart abandon by as much as 30%.

Global Address Complete is the only service to combine accurate Address Suggestion down to the apartment and suite level with industry-leading Address Validation capabilities. The result is your business is confident that the address chosen can receive mail and deliveries.

Global Address Complete is easily integrated with ecommerce platforms using simple JavaScript for quick deployment.

How It Works

Suggests Potential Addresses

Input keystrokes are used to predictively suggest complete addresses, which can be user-selected via a dropdown menu.

Validated and Delivery Indicators Provided

Returns address in components and USPS' Delivery Point Validation (DPV) results for US addresses.

Associated Location Data Returned for Addresses

Returns locality and administrative area data for addresses, as well as country code, associated business and latitude/longitude coordinates.

Language/Country Options for Global Addresses

Provides language of returned address as well as available alternative languages for global addresses, and optional country filter for results.

Revised: August 2022

Features and Benefits

The Only Auto-Completion Service That Simultaneously Suggests and Validates

Other autocomplete tools suggest addresses that may not exist or accept deliveries. Global Address Complete not only suggests addresses but also validates them at the point of entry, allowing your business to weed out and correct inaccurate address data before checkout is finalized. The result is fewer returns and chargebacks due to incorrect addresses and missed deliveries.

Global Coverage for 250+ Countries

Global Address Complete provides extensive coverage for countries across the world, including precision down to the apartment and suite level for most developed countries. Our authoritative data is continually updated and synched with each country's postal authorities, ensuring the most up-to-date addresses are suggested.

Improve Customer Checkout

Our lightning-fast service suggests accurate addresses from the first keystroke, decreasing the amount of typing required on digital forms by up to 80% and reducing data entry errors by more than 20%.

The result is a more streamlined user experience at checkout, improved delivery accuracy and enhanced customer satisfaction.
